

# Energy Audits

With utilities often the second or third-highest budget line item for organizations, all building operators want to save money on utilities, but frequently:

1. You aren't sure what to prioritize for investment of time and money
2. You don't have the resources to investigate your buildings and systems
3. You don't have the data to make the case for capital projects around energy efficiency

Brightly's Energy Audits help organizations identify the biggest opportunity for energy savings so that you can allocate resources to projects that will pay off and focus on what matters most – your community, students, citizens, and patients.

## Energy audits provide:

**Action-oriented recommendations** to save money, increase energy efficiency and address waste

**Peace of mind** that you are spending money on projects that will move the needle

**Time savings** and consultation from experts to identify where the organization is wasting utilities

**Compliance** to statewide/regional utility audit programs or requirements

When your audit is completed, you will receive a presentation of all the findings with recommendations for both capital and low/no-cost savings opportunities. We will also upload the audit into Energy Manager™, Brightly's energy management software, to ensure this data remains actionable and any projects performed as a result of the audit can be tracked and reported on for effectiveness.

If we can do our part at impacting our energy demand and usage, there's more money that translates to programs, teachers and salaries and maintaining that momentum of being a top-rated school district.

**Jennifer DuPlessis**  
Executive Director of Operations, Wylie ISD
