

IIoT: MODERN MANUFACTURING MAINTENANCE

Thanks to the increase in technology in manufacturing, organizations are now producing 47% more than they were 20 years ago. With a boost in employment and almost 2 million robots on plant floors worldwide, manufacturers are seeing soaring productivity.

To meet the demands of their production schedules, organizations are adopting more complex machines that require a maintenance program that's just as high-tech as they are. The Industrial Internet of Things (IIoT) and predictive maintenance (PdM) are key components to modern maintenance for manufacturing.

74.5%
of manufacturers use predictive maintenance (PdM)
