

10+ ROI Data Points of What You Can Save with TheWorxHub™ for Healthcare

So you're thinking about making an investment in a cloud-based CMMS for healthcare with TheWorxHub? You're in good company with the 1,600 healthcare organizations already using this tool to efficiently manage hospital maintenance and operations to improve compliance and keep patients safe. **Check out all the ways you can save with these ROI data points.**

WORK ORDER MANAGEMENT

Work order management in a healthcare setting is challenging, with facilities and Biomed teams being tasked with managing compliance, preventative maintenance, contractors and keeping patients and staff safe. Being stretched thin is the norm so opportunities to reduce workloads and create efficiencies are vital to the long-term success of all organizations.

\$101,000 annual savings

or **2,893 hours** saved with improvements in work order management with mobile access, cutting down calls, simple search, etc.

\$68,000
or **1,950 hours**

in productivity gained with **50% fewer trips** back to home base with mobile

\$24,000
or **683 hours**

in productivity gained annually by **easily logging staff time**

ASSET MANAGEMENT

You need a system that can easily capture and access full data on every asset to help you decide the optimal time to replace an asset versus continuing to repair. In addition, managing warranties, asset risk scores and AEM procedures or preventative maintenance and energy cost.

\$24,730 annual savings

in asset management gains

\$3,480

savings on smarter repair vs. replace decisions

BIOMEDICAL-RELATED WORK

Staying on top of all your BioMed Assets is challenging and time consuming. The processes for onboarding a new piece of equipment is onerous and duplicative with PMs, AEMs and Battery Management programs being setup for each asset purchased. TheWorxHub provides an easy way to create approved model templates, storing all the information into one place and replicating it was easy each time a new asset is purchased.
