Keep hearing about EAM but not sure where to start? You need a Green Quadrant star!

Brightly named one of top companies shaping the enterprise asset management market.

International research firm, Verdantix, examines 14 EAM vendors in its 2022 Verdantix Green Quadrant®: EAM Software report.

## Cool! So what exactly is EAM?

Enterprise asset management or EAM is a more future-proofed way to manage physical assets by understanding the full lifecycle of each asset within your operational ecosystem.

What does EAM do?

EAM helps organizations build a unified asset maintenance strategy within the wider business.

Maintaining assets throughout the life cycle

Keeping accurate inventory

Using data to recommend proactive maintenance

Increasing worker safety

The right solution can boost your business. Check out these standards for evaluating your EAM options.

## Technical and functional benchmarks to look for:

Types of technical capabilities include:

Application, data center security, and business intelligence

Configurability and deployment options

Integrations and mobile app architecture / use cases

User interfaces and more

Types of functional capabilities include:

Asset information, audit, contractor, customer and inspection management

Materials and inventory management
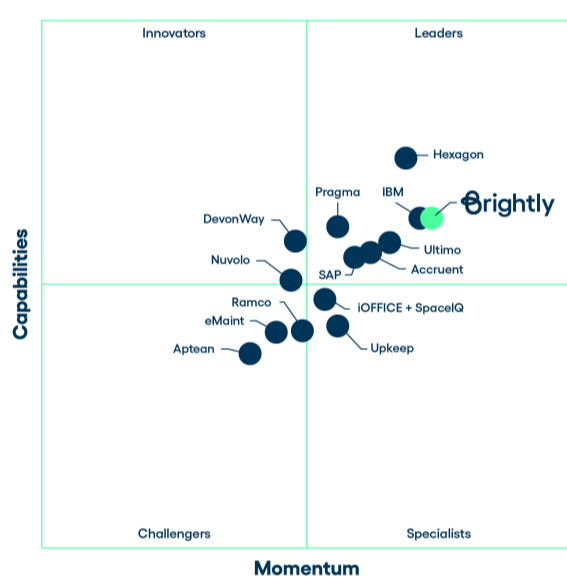

Mobile app product portfolio and use cases

Operational risk, procurement and project management

Maintenance analytics, resource planning and more

There are many strengths and differentiators for EAM solutions

Verdantix determined evaluation criteria using a combination of interviews with corporate practice managers and software executives, research, and discussions with multiple customers and staff.
